EXPERIENCE

Software Engineer **January 2025 – *Present***
S.W.I.F.T. SC Manassas, VA
Owning end-to-end development, maintenance. and enhancement of a **Java Spring Boot** and **Apache Kafka ETL** microservice deployed in **Kubernetes** clusters of 4 replica pods each in **OpenShift** and configurable in **ArgoCD** GitOps, ensuring reliable data flow from external APIs to a centralized **Apache Kafka** data lake used for financial analytics and display on **ElasticSearch.**

- Strengthening QA practices by documenting acceptance criteria, test cases, and workflows in **Jira** and **Confluence**, improving team-wide quality standards.
- Supporting DevOps operations through maintenance of **Ansible Tower** job templates on the **RHEL Ansible Platform**, enabling service upgrades, VM snapshots, and OS migrations.
- Supporting benchmarking and optimization efforts for the Swift financial messaging system's **C++** microservices to improve performance and reliability, gaining experience in profiling and systems monitoring.
- Leveraging Microsoft Copilot and Windsurf for enhanced software development delivery.
- Facilitating Grafana deployment for faster testing and quicker issue addressing of issues.

Software Engineer, Mission Systems **April 2023 – August 2024**
Geost, a Rocket Lab Company Reston, VA
Developed satellite payload test software in **C** to control camera payloads via user command packets and custom telemetry packets for differentiating general and specific transmissions.

- Rapidly learned and applied NASA's cFS framework and Space Packet Protocol (SPP) to implement reliable payload communication and control systems.
- Designed and implemented a secure data processing system using **FastAPI**, **Pydantic**, **SQLAlchemy**, and Dockerized databases, ensuring proper segregation of classified and unclassified payload data.
- Built a multi-threaded logging service in **C** to unify and optimize message handling.
- Developed a web application with **AWS Docker**ized microservices integrating AstroUXDS and CesiumJS for interactive 3D visualization of space objects; included **pgAdmin**, **FastAPI** APIs, CRUD operations, and enhanced UI features in **Typescript**.
- Performed integration testing with **PyTest** to ensure accurate payload-to-ground system data transmission.
- Collaborated with analysts and engineers nationwide to deliver space-based software solutions efficiently.
- Leveraged Microsoft Copilot and ChatGPT for enhanced software development delivery.

Software Engineer **August 2022 - April 2023**
Raytheon Technologies *(Subcontracted by ISYS Technologies)* Silver Spring, MD
Maintained critical AWIPS software for the National Weather Service, resolving configuration issues impacting weather warnings.

- Investigated and debugged **Java**, **Python**, and **XML** files on **RHEL**/**CentOS Linux** systems to ensure operational reliability.
- Engaged directly with NWS clients to gather feedback, prioritize issues, and improve user experience.
- Participated in Scrum and Kanban workflows, resolving debug tickets via Remedy and Redmine.
- Developed strong experience with legacy system maintenance, configuration management, and cross-team collaboration in high-stakes environments.

EDUCATION

College of William and Mary **Williamsburg, VA**
Bachelor of Science in Computer Science 2022
Dean's List: *2020, 2021*

TECHNICAL SKILLS

- **Programming & Scripting:** C, C++, C#, Python, Java (Spring Boot), Rust, JavaScript (ReactJS, Svelte, SolidJS), HTML, CSS
- **Databases & Data Formats:** SQL (MySQL, SQLite, PostgreSQL), MongoDB, JSON, XML, CSV, LaTeX
- **DevOps & Automation:** Docker, Podman, Kubernetes, Jenkins, SonarQube, Selenium
- **Tools & IDEs:** Git (GitHub, GitLab, Bitbucket, Codeberg), Vim, VSCode, Visual Studio, IntelliJ, Eclipse, Jira, Confluence
- **Operating Systems:** Windows, macOS, Linux (Ubuntu, Mint, Manjaro, CentOS, RHEL)
